Worth School
Turners Hill, West Sussex
2003-2007

CAREER OBJECTIVE

Having worked in the leisure industry for 14 years, I'm now looking for a career change into web development. I started learning in 2021 when I built my first Wordpress site for my dad's jazz band, and since then have progressed onto learning React.js, Next.js and Typescript.I have built several projects using these technologies.

I am continuing my learning into backend development with C# and .NET

PROJECTS

Anime Recommendations App

- Provides anime recommendations based on criteria given by the user
- Built using React.js and the Jikan API
- Fully mobile responsive
- Features:
  - A number of results filters
  - Automatic scrolling based on user interactions
  - Adaptive page pagination based on number of results

Lifeguard Quiz App

- Quiz app for NPLQ lifeguards to practice for their theory exams
- Built using React.js and data from mock NPLQ tests
- Fully mobile responsive
- Features:
  - Mode and category selection
  - Dynamic timer based on selected mode
  - Colour-coding answers when user selects
  - Page pagination based on number of questions
  - Results overlay so users can track progress

Artist Website

- Commissioned project for family member to showcase their artwork
- Built using Next.js, SendGrid and Contentful
- Fully mobile responsive
- Features:
  - Displays artwork based on Contentful entries
  - Filter artwork by category
  - Search artwork by title
  - Contact form powered by SendGrid
